Revolutionary New Procedure For
Permanent, More Shapely Lips

Board certified San Diego facial plastic surgeon, John M. Hilinski, MD, is pleased to announce the latest advancement in cosmetic lip enhancement – the Ful-Fil Saline Lip Implant.

For years now, women have been searching for the ideal procedure to provide them with fuller, plumper, shapelier lips. In most cases, achieving this youthful, feminine appearance requires volume enhancement of the lips. Recent trends have seen injectable fillers such as Restylane and Juvederm become increasingly popular choices for volume enhancement. Unfortunately, these fillers are all temporary, requiring multiple visits and accumulated expenses to

maintain the results. Although minimally invasive, fillers also require several injection sites, which can result in mild to moderate discomfort in some cases. Furthermore, lumping of the filler can be seen and felt in some patients' lips. Other options, such as Gore-Tex lip implants, can provide more long-term enhancement of the lip contour, but are potentially unnatural to the touch.

The latest advancement – The Ful-Fil Lip Implant – offers patients a permanent method of enhancing lip shape and size using an innovative, revolutionary designed implant. The Ful-Fil Lip Implant utilizes a saline-filled chamber wrapped in a thin biocompatible Teflon cover. In concept, this is very similar to saline-filled implants used in breast augmentation. Unlike prior lip implants, this new saline-filled chamber behaves more like a fluid. Consequently, the Ful-Fil Lip Implant actually moves with the motion of the lip. This provides a soft, natural feel while giving the lips improved volume and shape – without the need for repeat procedures to maintain results.

The Ful-Fil Lip Implant involves a minimally invasive procedure done in

the office under local anesthesia. Taking approximately 15-30 minutes to perform, the Ful-Fil Lip Implant procedure doesn't take much longer than having an injectable filler done. The implant is placed through a single incision that's well hidden on the inside of the lip. Pain is minimal and downtime is on the order of several days while swelling disappears. Within days, lipstick can be worn and patients can be seen in public.

Dr. Hilinski is the first plastic surgeon in San Diego to perform this cutting-edge procedure and foresees the revolutionary Ful-Fil Lip Implant as a popular new choice for patients seeking long-term cosmetic lip enhancement. If you are tired of repeat injectable lip fillers, or simply want fuller, shapelier lips, the Ful-Fil Saline Lip Implant may be just for you.
